SUBJECT INDEX TO VOLUME 21

Analysis of torsional interactions with power system stabilizer, 767
Approximate sub-optimum techniques for optimal power flow, 267
Assessment of the harmonic pollution due to line corona, 127

Bond graph simulation of a current source inverter driven induction motor (CSI-IM) system, 51

Comparative study of large hydraulic generators with air-cooling and water-cooling, 605
Comparison of speed nonlinear control strategies for the synchronous servo-motor, 151
Compensation of nonactive currents for three-phase power systems in sinusoidal steady state, 663
Computer simulation of three-phase thryristor voltage regulator fed static and induction motor loads—a generalized approach, 329
Capacitor braking of synchronous reluctance motors, 319

Design optimization of magnetic couplings using high energy magnets, 115
Determination of heat state of normal load induction motors by a non-lead test run, 355
Development of single-winding linear oscillatory actuator, 723
Diakoptical technique for short circuit studies of large size power system networks, 671
Dynamic analysis of a doubly fed generator in power system applications, 141
Dynamic braking resistor-reactor switching strategies through a novel linear transformation technique, 543

Exact quadratic state estimation algorithm using linear programming, 463
Extended synchronous machine model and estimation of parameters by a step function response of blocked rotor, 533

Fast algorithm for optimal hydrothermal scheduling with cascaded and independent hydro plants, 615

Incorporation of leakage path saturation in synchronous generator model, 343
Inductive sensors for distance measurement through a metallic screen: application to the primary control of a nuclear reactor, 405
Influence of quantization effects and parameters deviations on the performance of a field oriented asynchronous drive, 85
Influence of secondary winding terminal conditions on impulse distribution in transformer windings, 183
Influence of the induction motor velocity on the transient phenomena, 393

Loss of field solid state relay for protection of synchronous machines, 519

Modes, state variables, and local bifurcations in power system dynamics, 241

New approach for planning primary distribution networks, 683
New design criteria for spindles induction motors controlled by field oriented technique, 171
New method for determining the saturation curves in the intermediate axes of salient-pole synchronous machines, 199

New methods for the synthetic determination of the losses of three-phase induction motors, 371
Novel model for single-frame cascaded induction machine having a multicircuit rotor, winding, 783
Numerical simulation of synchronous generator on steady state, 507

On-line-estimation of temperatures in electrical machines by an observer, 39

Pole arcs optimization of vernier reluctance motors supplied with square wave current, 695
Polyoptimization problem in power core-type transformer design, 493
Power flow analysis and efficiency optimization of a doubly fed synchronous machine, 473
Power system PI controller design via optimal subeigenstructure assignment, 437
Preliminary considerations about the adoption of unconventional magnetic materials and structures for induction motors, 427

Reactive power compensation of a three-phase tandem induction generator, 627
Rotor flux computation in saturated field-oriented induction machines, 741

Simulation for small disturbance stability studies using frequency domain separation technique, 257
Sizing equations for single-sided linear induction motors, 25
Squirrel-cage motor with additional ring in rotor, 1
Stability analysis of field oriented doubly-fed induction machine drive based on computer simulation, 11
Stabilization of power systems using decentralized control, 293
Stable and realizable model identification for power system dynamic equivalent model, 711
Subsynchronous resonance (SSR) countermeasures applied to the second Benchmark model, 729
Synchronous starting of synchronous machine, 647

Terminal-pair reliability using network decomposition, 755
Torque and current stress of a three-phase induction motor due to non-simultaneous switch-on, 591
Transmission planning using admittance approach and quadratic programming, 69
Two-level optimal PI controller design, 449

Unification and classification of algebraic tests for loss of voltage stability, 557
Universal inverse-time overcurrent relay using integrated circuits, 281
Use of SVD for power system stabilizer signal selection, 229

Versatile load simulator for electric drives, 103

Welding transformer control by the electronic control of leakage flux, 217
